

People Overview

The People application is used to capture profile information on all individuals with whom our church maintains relationships. Church members, guests, visitors are all recorded in the application.

The People application has a Lists module which can be used to run fairly complex queries against data captured in all Planning Center applications. Some of these lists are used to roll up the information on activities that we then enter into the Checkins application to present on the Metrics dashboard, which is then viewed in the People application.

There is also a Forms module in People which permits generation of online forms to capture manually-entered information from individuals.

There is no cost for usage of People, as it is included when any other module subscription is put in place.

People is accessible either through a Windows workstation or through the People mobile application.
