

Fellowship Hall Kiosk

The Fellowship Hall Kiosk is mounted on the wall of the lobby. It is used to present prepared information videos to casual observers who may pass through the fellowship hall lobby.

The station consists of a flat screen monitor and a connected Amazon Fire Stick. The Fire Stick is an adapter which permits the flat screen TV to perform as a "Smart" unit, with applications available. For this application we use the DS-Video application which connects to our file server to access video files.
